Maharashtra (India)

3.1.1. Numpy Array Operations

05:16

Write a Python program to create a NumPy array based on user input and display the following:

The created NumPy array.

The number of dimensions of the array using `ndim`

The shape of the array using `shape`

The total number of elements in the array using `size`

Assume all input elements are valid integers.

Input Format:

The first line contains two space-separated integers, `rows` and `columns`, representing the number of rows and the number of columns.

The next lines contain space-separated integers representing the elements of the array, entered row by row.

Output Format:

The created NumPy array (printed as a 2D array).

An integer representing the number of dimensions of the array.

A tuple representing the shape of the array.

An integer representing the total number of elements in the array.

Note: Use `reshape()` function to reshape the input array with the specified number of rows and columns.

```
import numpy as np
```

```
# Read rows and columns
```

```
r, c = map(int, input().split())
```

```
elements = []
```

```
# Read elements row by row
```

```
for _ in range(r):
```

```
    elements.extend(list(map(int, input().split())))
```

```
# Create NumPy array and reshape
```

```
arr = np.array(elements).reshape(r, c)
```

```
# Output
```

```
print(arr)
```

```
print(arr.ndim)
```

```
print(arr.shape)
```

The screenshot displays a code execution environment with the following details:

- Performance Metrics:**
 - Average time: 0.014 s (14.42 ms)
 - Maximum time: 0.043 s (43.00 ms)
- Test Results:**
 - 2 out of 2 shown test case(s) passed
 - 10 out of 10 hidden test case(s) passed
- Test Case 1 Details:**
 - Status: Passed (43 ms)
 - Buttons: Debug, Menu, Print
 - Expected output:**
 - 3 4
 - 1 2 3 4
 - 5 6 7 8
 - 9 10 11 12
 - [[1. 2. 3. 4.]
 - [5. 6. 7. 8.]
 - [9. 10. 11. 12.]
 - 2
 - (3, 4)
 - 12
 - Actual output:**
 - 3 4
 - 1 2 3 4
 - 5 6 7 8
 - 9 10 11 12
 - [[1. 2. 3. 4.]
 - [5. 6. 7. 8.]
 - [9. 10. 11. 12.]
 - 2
 - (3, 4)
 - 12
- Test Case 2:** Passed (6 ms)

3.2.1. Numpy: Matrix

Operations 04:36

The given code takes two matrices, , and , as input from the user and converts them into NumPy arrays.

Task:

You are required to compute and display the results of the following matrix operations:

1. **Addition ()**
2. **Subtraction ()**
3. **Element-wise Multiplication ()**
4. **Matrix Multiplication ()**
5. **Transpose of Matrix A**

Input Format:

The user will input 3 rows for , each containing 3 integers separated by spaces.

Similarly, the user will input 3 rows for , each containing 3 integers separated by spaces.

Output Format:

The program should display the results of the operations in the following order:

1. The result of Addition.
2. The result of Subtraction.
3. The result of Element-wise Multiplication.
4. The result of Matrix Multiplication.
5. The Transpose of Matrix A.

```
import numpy as np
```

```
# Input matrices print("Enter
```

```
Matrix A:")
```

```
matrix_a = np.array([list(map(int, input().split())) for i in range(3)])
```

```
print("Enter Matrix B:")
```

```
matrix_b = np.array([list(map(int, input().split())) for i in range(3)])
```

```
# Addition
```

```
print("Addition (A + B):")
```

```
print(matrix_a + matrix_b)
```

```
# Subtraction print("Subtraction
```

```
(A - B):") print(matrix_a -
```

```
matrix_b)
```

```
# Multiplication (element-wise) print("Element-wise
```

```
Multiplication (A *
```

```
B):") print(matrix_a * matrix_b)
```

```
# Matrix multiplication (dot product)
```

```
print("A dot B:") print(np.dot(matrix_a,
```

```
matrix_b))
```

```
# Transpose
```

```
print("Transpose of A:")
```

```
print(matrix_a.T)
```

The screenshot shows a code editor interface with a test runner. At the top, it displays performance metrics: Average time 0.035 s (35.00 ms) and Maximum time 0.057 s (57.00 ms). Test results indicate that 2 out of 2 shown test cases passed and 2 out of 2 hidden test cases passed. The test case details for 'Test case 1' (57 ms) are shown below, comparing 'Expected output' and 'Actual output' for various matrix operations. The operations include inputting two 3x3 matrices (A and B), performing addition, subtraction, element-wise multiplication, dot product, and calculating the transpose of matrix A. The expected and actual outputs for all operations match perfectly.

Expected output	Actual output
Enter Matrix A:	Enter Matrix A:
1 2 3	1 2 3
4 5 6	4 5 6
7 8 9	7 8 9
Enter Matrix B:	Enter Matrix B:
1 1 1	1 1 1
1 1 1	1 1 1
1 1 1	1 1 1
Addition (A+B):	Addition (A+B):
[[2 3 4]	[[2 3 4]
5 6 7]	5 6 7]
8 9 10]]	8 9 10]]
Subtraction (A-B):	Subtraction (A-B):
[[0 1 2]	[[0 1 2]
3 4 5]	3 4 5]
6 7 8]]	6 7 8]]
Element-wise Multiplication (A*B):	Element-wise Multiplication (A*B):
[[1 2 3]	[[1 2 3]
4 5 6]	4 5 6]
7 8 9]]	7 8 9]]
A.dot(B):	A.dot(B):
[[6 6 6]	[[6 6 6]
15 15 15]	15 15 15]
24 24 24]]	24 24 24]]
Transpose of A:	Transpose of A:
[[1 4 7]	[[1 4 7]
2 5 8]	2 5 8]
3 6 9]]	3 6 9]]

3.2.2. Numpy: Horizontal and Vertical Stacking of

Arrays 02:19

You are given two arrays arr1 and arr2. You need to perform horizontal and vertical stacking operations on them using NumPy.

Horizontal Stacking : Stack the two matrices horizontally (side by side).

Vertical Stacking : Stack the two matrices vertically (one below the other).

Input Format:

The program should first prompt the user to input two 3x3 arrays.

Each array consists of 3 rows, and each row contains 3 space-separated integers.

The user will input the two arrays row by row.

Output Format:

The program should display the result of the Horizontal Stack (side-by-side stacking) of the two arrays.

The program should then display the result of the Vertical Stack (one below the other) of the two arrays.

```
import numpy as np
```

```
# Input matrices print("Enter
```

```
Array1:")
```

```
arr1 = np.array([list(map(int, input().split())) for i in range(3)])
```

```
print("Enter Array2:") arr2 = np.array([list(map(int,  
input().split())) for i in range(3)])
```

```
# Perform horizontal stacking (hstack)
```

```
print("Horizontal Stack:") print(np.hstack((arr1,  
arr2)))
```

```
# Perform vertical stacking (vstack) print("Vertical  
Stack:") print(np.vstack((arr1, arr2)))
```

3.2.3. Numpy: Custom Sequence

Generation 01:25

Write a Python program that takes the following inputs from the user:

Start value: The starting point of the sequence.

Stop value: The sequence should end before this value.

Step value: The increment between each number in the sequence.

The program should then generate a sequence using numpy based on these inputs and print the generated sequence.

Input Format:

The user will input three integer values: start, stop, and step, each on a new line.

Output Format:

The program should print the generated sequence based on the input values.
import numpy as np

Take user input for the start, stop, and step of the sequence

start = int(input()) stop = int(input()) step = int(input())

Generate the sequence using np.arange()

sequence = np.arange(start, stop, step)

Print the generated sequence print(sequence)

3.2.4. Numpy: Arithmetic and Statistical Operations, Mathematical Operations, Bitwise Operators

02:59

You are given two arrays A and B. Your task is to complete the function `array_operations`, which will convert these lists into NumPy arrays and perform the following operations:

1. Arithmetic Operations :

Compute the element-wise sum, difference, and product of the two arrays.

2. Statistical Operations :

Calculate the mean, median, and standard deviation of array A.

3. Bitwise Operations :

Perform bitwise AND, bitwise OR, and bitwise XOR on the arrays (ex: A_i OR B_i).

Input Format:

The first line contains space-separated integers representing the elements of array A.

The second line contains space-separated integers representing the elements of array B.

Output Format:

For each operation (arithmetic, statistical, and bitwise), print the results in the specified format as shown in sample test cases.

```
import numpy as np
```

```
def array_operations(A, B):
```

```
# Convert A and B to NumPy arrays
```

```
    A = np.array(A)
```

```
    B = np.array(B)
```

```
    # Arithmetic
```

```
    Operations sum_result
```

```
    = A + B diff_result = A
```

```
    - B prod_result = A * B
```

```
    # Statistical Operations mean_A
```

```
    = np.mean(A) median_A =
```

```
    np.median(A) std_dev_A =
```

```
    np.std(A)
```

```
# Bitwise Operations and _result
= np.bitwise_and(A, B) or_result
= np.bitwise_or(A, B) xor_result =
np.bitwise_xor(A, B)

# Output results with one space between each element

print("Element-wise Sum:", ' '.join(map(str, sum_result)))
print("Element-wise Difference:", ' '.join(map(str, diff_result)))
print("Element-wise Product:", ' '.join(map(str, prod_result)))
```

```

print(f"Mean of A: {mean_A}") print(f"Median
of A: {median_A}")
print(f"Standard Deviation of A: {std_dev_A}")

print("Bitwise AND:", ' '.join(map(str, and_result)))
print("Bitwise OR:", ' '.join(map(str, or_result))) print("Bitwise
XOR:", ' '.join(map(str, xor_result)))

```

```
A = list(map(int, input().split())) # Elements of array A
```

```
B = list(map(int, input().split())) # Elements of array B
```

```
array_operations(A, B)
```

The screenshot shows a code execution environment with a sidebar on the left labeled 'Explorer' and a sidebar on the right labeled 'Debugger'. The main area displays test results for a function named 'array_operations'. At the top, there are statistics: 'Average time 0.013 s 13.00 ms', 'Maximum time 0.018 s 18.00 ms', and '1 out of 1 shown test case(s) passed' and '2 out of 2 hidden test case(s) passed'. Below this, a 'Test case 1' is shown with a 'Debug' button. The test case details are as follows:

Expected output	Actual output
1 2 3 4	1 2 3 4
5 6 7 8	5 6 7 8
Element-wise Sum: 6 8 10 12	Element-wise Sum: 6 8 10 12
Element-wise Difference: -4 -4 -4 -4	Element-wise Difference: -4 -4 -4 -4
Element-wise Product: 5 12 21 32	Element-wise Product: 5 12 21 32
Mean of A: 2.5	Mean of A: 2.5
Median of A: 2.5	Median of A: 2.5
Standard Deviation of A: 1.118033988749895	Standard Deviation of A: 1.118033988749895
Bitwise AND: 1 2 3 0	Bitwise AND: 1 2 3 0
Bitwise OR: 5 6 7 12	Bitwise OR: 5 6 7 12
Bitwise XOR: 4 4 4 12	Bitwise XOR: 4 4 4 12

3.2.5. Numpy: Copying and Viewing

Arrays 04:17

The given code takes a list of integers as input and converts it into a NumPy array. Your task is to complete the code by:

Creating a view of the original_array and assigning it to view_array.

Creating a copy of the original_array and assigning it to copy_array.

After completing these steps, observe how modifying the view affects the original_array, while modifying the copy does not.

Input Format:

A single line of space-separated integers.

Output Format:

After modifying the view:

Original array after modifying view: <**original_array**

> View array: <**view_array** >

After modifying the copy:

Original array after modifying copy: <**original_array**

> Copy array: <**copy_array** >

```
import numpy as np
inputlist = list(map(int,input().split(" ")))
```

```
# Original array original_array =
```

```
np.array(inputlist)
```

```
# Create a view
```

```
view_array = original_array.view()
```

```
# Create a copy
```

```
copy_array = original_array.copy()
```

```
# Modify the view view_array[0] = 99 print("Original array  
after modifying view:", original_array) print("View array:",  
view_array)
```

```
# Modify the copy copy_array[1] = 88 print("Original array  
after modifying copy:", original_array) print("Copy array:",  
copy_array)
```

3.2.7. Student Data Analysis and Operations

25:13

Write a Python program that takes the file name of a CSV file containing student details, including roll numbers and their marks in three subjects as input, reads the data, and performs the following operations:

Print all student details : Display the complete details of all students, including roll numbers and marks for all subjects.

Find total students : Determine the total number of students in the dataset.

Print all student roll numbers : Extract and print the roll numbers of all students. **Print Subject 1 marks** : Extract and print the marks of all students in Subject 1. **Find minimum marks in Subject 2** : Identify the lowest marks in Subject 2.

Find maximum marks in Subject 3 : Identify the highest marks in Subject 3.

Print all subject marks : Display the marks of all students for each subject.

Find total marks of students : Compute the total marks for each student across all subjects.

Find the average marks of each student : Compute the average marks for each student.

Find average marks of each subject : Compute the average marks for all students in each subject.

Find average marks of Subject 1 : Compute the average marks

and Subject 2 : Compute the average marks

for Subject 1 and Subject 2. **Find**

average marks of Subject 1

and Subject 3 for Subject 1

and Subject 3.

Find the roll number of the student with maximum marks in Subject 3 : Identify the student with the highest marks in Subject 3 and print their roll number.

Find the roll number of the student with minimum marks in Subject 2 :
Identify the student with the lowest marks in Subject 2 and print their roll number.

Find the roll number of students who scored 24 marks in Subject 2 :
Identify students who obtained exactly 24 marks in Subject 2 and print their roll numbers.

Find the count of students who got less than 40 marks in Subject 1 :

Count the number of students who scored less than 40 marks in Subject 1.

Find the count of students who got more than 90 marks in Subject 2 :

Count the number of students who scored more than 90 marks in Subject 2.

Find the count of students who scored ≥ 90 in each subject : Count the number of students who scored 90 or more marks in each subject.

Find the count of subjects in which each student scored ≥ 90 :

Determine how many subjects each student scored 90 or more marks in.

Print Subject 1 marks in ascending order : Sort and print the marks of students in Subject 1 in ascending order.

Print students who scored between 50 and 90 in Subject 1 : Display students who scored marks between 50 and 90 in Subject 1.

Find index positions of students who scored 79 in Subject 1 :

Identify the index positions of students who scored exactly 79 marks in Subject 1.

Note: Fill in the missing code to perform the above-mentioned operations.

```
import numpy as np
```

```
a = np.loadtxt("Sample.csv", delimiter=',', skiprows=1)

# 1. Print all student details
print("All student Details:\n", a)

# 2. Print total students print("Total
Students:",
a.shape[0])

# 3. Print all student Roll numbers print("All
Student Roll Nos", a[:,
0])

# 4. Print subject 1 marks
print("Subject 1 Marks", a[:, 1])

# 5. Print minimum marks of Subject 2 print("Min
marks in Subject 2", np.min(a[:, 2]))

# 6. Print maximum marks of Subject 3 print("Max
marks in Subject 3", np.max(a[:, 3]))

# 7. Print All subject marks print("All
subject marks:", a[:, 1:])

# 8. Print Total marks of students total_marks
